

ABDUL SAMAD

+91-7651870377 | samadkhan3143@gmail.com | [GitHub](#) | [LinkedIn](#) | [LeetCode](#)

Skills

Programming Languages: Java | Python | JavaScript

Backend: Spring Boot | Microservices | REST APIs | Kafka | Event-Driven Architecture | NodeJs

Databases: MongoDB | PostgreSQL | MySQL | Redis

DevOps & Tools: Docker | Jenkins | GCP | GitHub Actions | SonarQube | ELK | AWS (basic)

Experience

Unthinkable Solutions

Gurugram, India

Associate Software Engineer

12/2023 - Present

- Led migration of a legacy monolith from Spring Boot 1.2 to 2.7, refactoring deprecated APIs and re-engineering custom Jetty session management. Improved system stability and scalability by 30% while preserving existing session semantics
- Architected AI integration layer supporting multiple **LLM** providers with runtime model switching and failover.
- Built **OCR**-based image/audio contact ingestion pipeline with validation workflows.
- Implemented **FCM**-based notification system handling high volumes with optimized queries and cron jobs.
- Developed backend APIs leveraging **Google APIs** and implemented **OAuth2**-based authentication flows, configuring and optimizing authorization settings
- Integrated **Stripe payment gateway** into the project, enabling secure and seamless payment processing for users.
- Proactively resolved customer issues through root cause analysis and fixes, reducing customer **issues** from **30% to 5%**, significantly improving system reliability and user satisfaction.
- Designed subdomain-based user fetching strategy, avoiding bulk retrieval of ~250K main-domain users and decreasing infrastructure load by 30–40%, significantly improving sync performance and system scalability.
- Resolved a long-standing production issue in Google Contacts synchronization ("Connection Empty" bug), restoring stability for enterprise customers.

Cognizant

Hyderabad, India

Programmer Analyst Trainee

09/2023 - 12/2023

- Completed enterprise-level backend training focused on **Spring Boot**, **REST APIs**, and **AWS** fundamentals. contributed to backend feature development and API modules.
- Collaborated on small-scale projects, applying theoretical knowledge to real-world scenarios and delivering functional components.

Projects

Contacts Flow

<https://www.contactsflow.ai>

- Built **scalable** backend services using Java and Spring Boot to extend Google Contacts with additional features like enhanced sync, validation workflows, and event-driven processing.
- Designed a versioned contact history system ensuring auditability and data consistency
- Used **LLMs** to enable intelligent contact creation and updates, along with **OCR** for automated data extraction

AI Dietician

<https://github.com/Abdul-Samad-01/AIDietician>

- Developed a dynamic **AI Dietician** app offering personalized diet plans and progress tracking using a vast dataset, utilizing **Spring Boot** for backend **APIs** and **PostgreSQL** for data storage.
- Integrated AI-based recommendation logic with structured prompt handling and response validation workflows.
- Applied rate limiting (Token Bucket strategy) to prevent API abuse and ensure controlled resource usage.

Education

Shri Ramswaroop College of Engineering and Management

Lucknow, India

Bachelor of Technology in Information Technology

08/2019- 08/2023
